SUPERCRAANE

ALICE SPRINGS – DARWIN RAILWAY PROJECT MAJOR BRIDGES

This testimonial confirms that **Supercrane 2000** contributed greatly to the success of the construction of the Elizabeth River Rail Bridge the longest and most complex of the Major Bridges on the Alice Springs to Darwin Railway. **Supercrane 2000** designed, supplied and commissioned safely and efficiently the 70 Tonne gantries used to erect the 56 Tonne 30 metre long tee roff beams on the Elizabeth River Rail Bridge in late 2002.

Their performance was of the highest quality with safety always at the forefront.

I would have no hesitation using them again or recommending their work.

Yours faithfully,

A.B.Tanna
Manager - Major Bridges
